SOQIC

Clinical Documentation?

Standardized clinical documents benefit all aspects of an agency's business. From higher quality control in consumer care to cleaner audit trails around business and clinical practices to simplified training, these benefits all positively affect an agency's bottom line. ProComp Software Consultants, Inc. is proud to aid in the standardization process by introducing 26 SOQIC forms to the CATT Clinical Desktop.

The SOQIC forms integrate seamlessly with CATT's flexible and robust Clinical Desktop and give users the ability to use all of CATT's other powerful features along side the new SOQIC documentation.

Developed for Windows® with the ability to port real time data to other platforms via our Bridge HL-7 interface.

Highly integrated with the Microsoft Office® suite including automated interfaces to Word® and Excel®.

A uniquely visual multi-payor accounts receivable system with an automated double entry adjustment processor.

Flexible G/L number generator for interfacing to accounting packages.

Tiered data system that adapts to a variety of LAN and WAN configurations.

100 hours of support included with purchase for customization and training.

An open software environment encouraging agencies to extend functionality with configurable tables, forms, queries and reports along with training through our EMPOWER program to provide that education.

All MACSIS data reporting mandates including ANSI-837 claim processing, ANSI-835 Remittance processing, Behavior Health Module, Ohio Scales Outcomes and Enrollment EDI.

Password driven electronic signatures and graphic pen driven signatures available on all clinical documents.

Disconnected Clinician's Desktop allows CATT to be run in the field away from the agency network.

What does CATT stand for?

"Clinical Assessment Tracking and Triage"... a comprehensive software management tool for behavioral health organizations. CATT is first and foremost a patient tracking and case management system for the clinical/ case management staff of a multi-program behavioral health agency. On the back end of the case management system lies a highly integrated AR/ MIS system that is unmatched in its flexibility, power and ease of use.

What does ProComp stand for?

Exceptional support services and unmatched expertise with Ohio MACSIS mandates and clinical desktop automation. With CATT's 100% open architecture software development environment, ProComp account managers are able to assist their agency clients to implement the CATT data system across far more areas of functionality within the agency than what is typical with other behavioral health MIS software.
